INTERNATIONAL SEARCH REPORT

International application No.
PCT/US 99/20111

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:
2. ☐ Claims Nos.:
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☒ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Claims 1-27 (all partially)

Remark on Protest

☐ The additional search fees were accompanied by the applicant's protest.

☐ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

1. Claims: 1-27 all partially

An isolated nucleic acid having at least 80% homology to a nucleotide sequence that encodes a polypeptide comprising an amino acid sequence shown in figure 2 SEQ ID 4; said nucleotide sequence comprising a nucleotide sequence shown in Figure 1 SEQ ID 3; a vector comprising said nucleic acid; a host cell comprising said vector; a process for producing said protein using said host; an isolated PRO polypeptide having at least 80% identity to an amino acid sequence that encodes a polypeptide comprising an amino acid sequence shown in figure 2 SEQ ID 4 designated by PR01560 polypeptide; a chimeric molecule comprising said polypeptide fused to a heterologous amino acid sequence; an antibody against said polypeptide; an isolated extracellular domain of this PR01560 polypeptide or an isolated polypeptide having at least 80% amino acid identity with said domain; an isolated PR01560 polypeptide lacking its associated signal peptide or an isolated polypeptide having at least 80% amino acid identity with said fragment; an isolated nucleic acid encoding one of said polypeptides.

2. Claims: Inventions 2-123 : claims 1-27 all partially

Inventions 2-123: Idem as subject 1 but limited to each of the designated proteins, where
